New easy program Automatic fire remote control fireworks firing system (DBR01-X12 series)

- › The transmitter is our DBR01-X transmitter, receiver with 12 channels.
- › There are **5 modes** to show different function on the receiver:
- › **F1 mode**: all the 12 cues do the same time sequential fire (you can adjust the sequential fire time from 0.1s to 99.9s)
- › **F2 mode**: adjust each cue with different sequential fire time (you can adjust the sequential fire time from 0.1s to 99.9s)
- › **F3 mode**: adjust the district, one transmitter can control 100 different districts
- › **F8 mode**: test the voltage, in this mode you can see the receivers voltage, if the voltage is more than 7V, then you can use the receivers normally
- › **F9 mode**: Program, if you want to add more receivers in the near future, you can use this mode to program, if you ordered our DBR01-X transmitter before, you just need to order our DB12r(12 cues) receivers and program it, then you can use it.

Automatic fire: If you order one DBR01 transmitter and 4 receivers, and you set up the different fire time or different mode for each receiver, when you press the fire button the transmitter, all the 4 receivers will fire Automatic(from the first one to the last one)
